- How & Who

Introduction

In 2008, residents voted to establish a Drinking Water and Watershed Protection Service...

Today, we are going to talk about where we are:

- **DWWP program update**
- **Water Budget Study review**
- **Integrated Watershed Management Planning**

Introduction: Partnerships

Our program is founded on partnerships and collaboration

Municipalities:

The public: residents, community associations, streamkeeper groups, professionals, students.

Other governmental organizations:

Other RDN departments:

Sustainability, Wastewater, Rec & Park

Introduction: Program development

2008

The RDN became the **first regional government in British Columbia to start a Drinking Water & Watershed Protection service**

2009-Present

The DWWP is guided by a **technical advisory committee** of experts from: forestry, hydrogeology, academia, community stewardship, fisheries, water services

The program is guided by the an **Action Plan** that outlines the key goals and objectives

7 Program Actions

1. DWWP Program Update

DRINKING WATER
WATERSHED
PROTECTION

DWWP update: Program 7

Adapting to Climate Change

- **Sustainability** - ensure sustainable aquatic ecosystems with intact riparian vegetation and adequate instream flows.
- **Adaptability** - find ways to do more in-season management of water that is based on real time data.
- **Collaboration** - public processes at the watershed level that develop information and inform decision-making in a public way
- **Efficiency** - conservation of water and more efficient use

Water Budget Study

• Gabriola, Mudge, & Decourcy Water Budget Project Report

Prepared by:

The map shows the outline of Vancouver Island with several watersheds delineated. The watersheds for Gabriola Island, Mudge Island, and Decourcy Island are highlighted in green. Other labeled watersheds include Qualicum Beach, Parksville, Lantzville, and Nanaimo.

• Vancouver Island Water Budget Project Report

Prepared by:

The map shows the entire outline of Vancouver Island, with the entire island area shaded in green, indicating a comprehensive watershed study. Labeled locations include Qualicum Beach, Parksville, Lantzville, Nanaimo, Gabriola Island, Mudge Island, and Decourcy Island.

- What & Why
- How & Who

Water Budget Study: Background

→ Project Goal

To improve understanding of regional water resources by:

- Identifying water stores
- Estimating how much water they hold
- Characterizing how water moves between the stores
- Identifying water stores under stress

→ Justification

The Water Budget Project was specifically developed to.....

- ✓ Meet the goal of the DWWP program:
[to ensure that we have a sufficient, safe and sustainable supply of water]
- ✓ Address the direction of the 2010 Snapshot Report:
[to ensure sufficient clean water for human, environmental, and economic needs]

- Overview
- Methodology
- Findings
- Conclusion

3. Watershed Management

- What & Why
- How & Who

Findings: Vancouver Island

WR3: French Creek recommendations:

- Observation well in aquifer 212
- Summer surface flow measurements at Morning Star Creek, Grandon Creek & Carrey Creek

WR4: Englishman River recommendations

- Observation wells in aquifers 209, 219 & 214 & 221
- Further study of surface – groundwater interaction (EM River)
- Summer surface flow measurements at Morrison Creek & Swane Creek

PRESENTATION

1. DWWP update

- Program 4
- Program 5
- Program 6
- Program 7

2. Water Budget

- Background
- Overview
- Methodology
- Findings
- Conclusion

3. Watershed Management

- What & Why
- How & Who

Findings: data gaps

Author recommendations:

1. Mandatory **well log** submission
2. Standardization of **aquifer testing**
3. Increase **well observation** network
4. Reactivation of **stream gauging** (WSC)
5. Increase **saline intrusion monitoring**
6. Improve Water Budget **calculation parameters**

- Gabriola → water use data from survey
- Hydrological properties

PRESENTATION

- Program 3
- Program 4
- Program 5
- Program 6
- Program 7

2. Water Budget

- Background
- Overview
- Methodology
- Findings
- Conclusion

3. Watershed Management

- What & Why
- How & Who

Conclusion

The Phase One Water Budgets provide the most comprehensive collation of information on the region's water resources that has been made available to date

- Results are **purely conceptual** and not intended for water management decision making or policy development
- Large degree of **uncertainty** due to lack of data
- Highlights data gaps and need for **increased monitoring**
- Stepping stone for the future!

The screenshot shows the homepage of the RDN Water Budget Project website. At the top, there is a navigation bar with links for Home, Introduction, News, Vancouver Island, Gulf Islands, Water for Agriculture, and Water 101. The main content area is titled "Welcome!" and features a "What's New" section with public info sessions in Nanaimo and Parksville. Below this is a "Recently Posted" section with links to geology and DWWP program information. The central focus is a "Water Budget Project" diagram showing three phases: Phase One (Conceptual Model, Water Budget Calculations, Relative Stress Assessment), Phase Two (Data Collection, Analysis, Prioritization), and Phase Three (Hydrological Modeling, Water Budget Model, Integrated Watershed Management Plan Development). The diagram also includes a map of the RDN divided into seven water regions and a list of data sources like Ecological Components, Climate Studies, and Water Quality. A "Learn more about the Project" link is provided at the bottom.

Download

The thumbnail displays the cover of the report titled "Water Budget Project: RDN Phase One (Gabriola, DeCourcy & Mudge Islands)". It is prepared for the Regional District of Nanaimo. The cover features the RDN logo and a map of the region highlighting the specific water regions. At the bottom, it lists the consulting firms: SRK Consulting (Canada) Inc. and Thunder Engineering Ltd., along with the report number ICR010-000 and the date April 2013.

Integrated Watershed Management Planning

WHAT is a Integrated Watershed Management Plan?

It considers all human and environmental aspects of a watershed

- Conclusion

3. Watershed Management

- What & Why
- How & Who

Integrated Watershed Management Planning

WHY is it needed?

- Land use activities such as forestry, mining, agriculture, urbanization, fisheries and recreation all impact water resources

- Water resource problems are reaching global proportions; how we manage our water and how our neighbors manage theirs has an impact on all of us

- There is a wide variety of processes that affect the hydrological cycle; only managing one aspect is mismanagement. A holistic approach is the only way forward

- How & Who

Integrated Watershed Management Planning

HOW? *What does a planning framework include?*

1. Identification of **river basin areas** (water regions)
2. Identification of **water resources** (surface and ground water)
3. Identification of **measurement** parameters (chemical/ecological/social)
4. Identification of **protected areas** (forests, parks, fisheries)
5. Assess **current state** (i.e. poor, good, high) → **WHAT**
6. Reasons for **not achieving** good status → **WHY**
7. **Action plan** to achieve good status/improve → **HOW**

3. Watershed Management

- What & Why
- How & Who

Integrated Watershed Management Planning

WHO?

A key component to the success of these plans is public input...you live in the watershed! You know it best

Where do we go from here?

In your opinion:

- what are the priority watershed issues?
- who is responsible for watershed management?
- what do you think the DWWP program should focus on?

DRINKING WATER
WATERSHED
PROTECTION

Thank You!
