

One Day Introduction to Passive House Design and Construction

This one day course will provide you with a fundamental understanding of the elements of Passive House design, which leads to cost effective, low energy buildings with increased occupant comfort and reduced mechanical systems.

Parksville Community Conference Centre
Parksville, BC
September 17, 2015

What you'll learn:

- Passive House design fundamentals
- Super insulated envelopes
- Methods for achieving extreme air tightness
- Passive house quality windows
- Leading ventilation design principles
- Passive house economics and costs, including what to consider when conducting an economic comparison

Who attends?

- Construction industry professionals
- Architects and designers
- Local government
- Real estate agents
- Home owners and developers
- Sustainability enthusiasts and anyone interested in learning the basics of energy efficient building

Course fee:

This course is generously funded by the Regional District of Nanaimo (RDN), and residents and businesses within the RDN can register for the discounted price of \$50. Residents outside of the RDN can still attend at the regular price. Lunch and refreshments are included.

Course instructor:

Monte Paulsen is one of Canada's most active Passive House consultants and has extensive experience advising in a variety of projects, including: a First Nations firehall, two multi-story apartment buildings, a modular row-house terrace and several single-family residences being constructed to the international Passive House standard.
